VIACHESLAV BELTYUKOV

OBJECTIVE

As a Senior iOS Developer with over 10 years of production experience, I have a proven track record of developing mobile applications using both Swift and Objective-C. My experience includes examples of making difference in technical area as a high skilled individual contributor and in organizational area as a team leader.
I'm a big fan of data-driven development including AB-tested rollouts and getting insights through analytics. I excel in building foundational blocks that are meant to be scaled.
Mentoring is one of my favorite aspects of work, I feel satisfied when I see my mentees grow. I often suggest improvements to the workflow regardless of my role in the team.

EDUCATION

Mechanical Engineer, Samara State Aerospace University (SSAU)

SKILLS

Programming languages	Swift, Objective-C, Java
Tools	Xcode, Bitrise, Github Actions, Charles, Proxyman
Frameworks	UIKit, SwiftUI, RxSwift, Core Data

EXPERIENCE

Senior iOS developer Aug 2024 - Now
inDrive *Limassol, Cyprus*

- Worked in a payment processing team as a leading iOS Developer. Owned iOS code base and backlog.
- Lead implementation of Brazil-specific PIX payment system. Coordinated development and testing efforts across backend, iOS and Android mobile apps.
- Reduced implementation time of country-specific payment features from 3 to 1 month.

Senior iOS developer Mar 2022 - Aug 2024
Palta Group *Limassol, Cyprus*

- Developed Swift-based in-house SDKs for payment processing and analytics that reduced costs and removed dependencies on third party services. SDKs were adopted by several apps with MAU of 100K range.
- Improved data loss beyond industry leaders by increasing performance, better error handling and advanced batching strategy. It led to 20% increase in trust to platform among data analysts according to recurring survey.
- Led SDK design process across iOS, Android and web to adopt common practices and reduce cost of development. As a result, last started SDK required 50% less time to be implemented.

Lead software engineer Jul 2021 - Feb 2022
Rarible.com *Saint-Petersburg, Russia*

- Led the development of NFT discovery app which scaled organically to 250k MAU within 2 months. Worked in cooperation with Product Manager from inital roadmap design till the App Store submission.
- Created fast-pacing development environment by adopting SCRUM, designing scalable app architecture based on MVVM and RxSwift, effective automatization with CI. This transformation boosted team capacity by 50%.

Senior software engineer Feb 2020 - Jul 2021
Joom *Saint-Petersburg, Russia*

- Managed successful rollout of new features such as new catalog or top banners through AB testing on a userbase of 1m MAU. Utilized internal AB testing platform along with BigQuery to get insights on failed experiments.
- Rewrote main product page from Objective-C to Swift simultaneously with using new API for dynamic block ordering. It allowed to lower experiment preparation time from 5 to 1 day.
- Implemented snapshot testing and supporting tooling with SwiftUI-like experience for pure UIKit-based app. Number of visual bugs found on regression testing dropped by 60%.

Lead software engineer Nov 2018 - Feb 2020
EPAM Systems *Saint-Petersburg, Russia*

- Headed promotional committee on 4 cases. Organized experts work in order to evaluate candidates' progress in technical skills, communication abilities and project achievements. It resulted in better retention of high value employees.
- Mentored technical interviewers in different locations to setup common interview practices such as common structure, standardized questions and evaluation framework. It led to better level alignment across locations.
- Implemented server-driven UI framework for client company in order to reduce development of new news apps to as little as several weeks. It included common fetching, caching and rendering through collections.

Senior software engineer Jun 2017 - Nov 2018
EPAM Systems *Saint-Petersburg, Russia*

- Reduced app start time 4x by use of cache, optimized network calls and static linking growing retention by 10%.
- Mentored a group of interns on development of internal iOS app, resulting in an 80% hire rate which saved company a month-worth work of recruiters to fulfill these positions.

Software engineer Sep 2016 - Jun 2017
EPAM Systems *Saint-Petersburg, Russia*

- Refactored client's app architecture from MVC to VIPER and improved test coverage resulting in a 20% reduction in app crashes.
- Implemented new app from scratch to use in-house in Adidas stores using Swift and MVVM. High utilization of code from previous app allowed rapid delivery within a month.
- Collaborated with cross-functional teams to identify and resolve critical issues on the backend using Springboot. As result, as a team we managed to achieve response time to a bugs that affect both client and backend within a day.

iOS developer Jan 2016 - Sep 2016
fitnessonline.me *Samara, Russia*

- Implemented a number of key screens during initial development: workout history, nutrition database and user feed. With a use of MVC and Objective-C, these screens were developed in timely manner.
- Managed app rollout in App Store connect.

Software engineer Mar 2015 - Dec 2015
Netcracker Tecknology *Samara, Russia*

- Participated in features implementation and client integrations using Java 7

Indie developer Apr 2013 - Dec 2015
Samara, Russia

- Developed and released several iOS application under my own name
- Reached Top 15 reference apps in Russian App Store
- One of app reached MAU 20k
